PROFESSIONAL SUMMARY

Mechanical designer with end-to-end hardware experience spanning R&D prototyping, Class-A surfacing, and production-ready geometry. Proven ability to own full design cycles independently across startup and R&D environments, from constraint-driven enclosures to wearable neurotech and competition robotics. Currently pursuing a B.S. in Industrial Engineering at UC Berkeley.

EDUCATION

University of California, Berkeley

B.S. Industrial Engineering & Operations Research (IEOR).

Berkeley, CA

Expected May 2028

Foothill-De Anza College

A.S. Mathematics & Physics (transfer).

Cupertino, CA

Expected Jun. 2026

EXPERIENCE

R&D Hardware Designer

Infineon Technologies PSOC6

Apr. 2025 – Present

Cupertino, CA

- Designed manufacturable NURBS enclosure for AI drone prototype in collaboration with Infineon's AI R&D team, ensuring proper fastener strategy, PCB mounting, and print-ready geometry.
- Selected as sole mechanical and visual designer among 5 students from 20,000+, leading usability and aesthetic design decisions.
- Developed advanced Class-A surfacing and iterative prototype geometry for hardware built on a pre-release PSOC-6 embedded AI platform, integrating sensors and electronics into functional assembly.

Chief Design Officer

NeuroFocus BCI

Sep. 2025 – Present

San Jose, CA

- Owned end-to-end mechanical and industrial design of wearable neurotech hardware integrating ECG sensors into a lightweight, ergonomic headset-mountable system.
- Developed full NURBS-based product geometry and prototype iterations independently; project supported by SJSU and Foothill College startup incubators and in collaboration with T1 Korea.

Lead Robot Designer

FIRST Robotics (FRC/FTC)

May 2021 – July 2024

Fremont/Palo Alto, CA

- Led mechanical architecture for 7+ competition robots; World Championship Finalist (#4 globally) and 4x Regional Champion.
- Designed high-performance mechanisms under strict weight, power, and reliability constraints.
- Earned Excellence in Engineering and RTX Innovate awards for mechanical and systems design.

PROJECTS

TBD Consulting <https://enzo-emami.github.io/tbd-consulting/#work>

Jan. 2025 – Present

Founder & Principal Designer

- Founded independent design consultancy delivering advanced NURBS parametric surfacing and product concept development for clients including Pinkbike, AMD, and Autodesk.
- Executed end-to-end design workflows across branding, industrial form development, and constraint-driven geometry, spanning completed engagements and active client partnerships.
- Managed project scope, iterative feedback cycles, and production-ready deliverables independently across all client work.

ACTIVITIES & LEADERSHIP

Emami Robotics Alliance (ERA)

Aug. 2025 – Present

Founder & Director

- Founded Bay Area intercollegiate combat robotics network uniting Stanford, UC Davis, SFSU, De Anza, Foothill, Cañada, and Mission College under a unified ERA ruleset and event framework. Authored the official competition ruleset adopted across all member institutions; designed safety systems and scalable event infrastructure supporting 100+ students across 7 campuses. Secured \$10,000 in institutional funding through the FHDA Foundation in support of competition operations and cross-campus growth.

SKILLS

Design & Engineering: Constraint-Driven Geometry, Advanced NURBS Modeling, Parametric Surfacing, 3D Printing/CNC/Manual Machining, Mass Prototyping & Benchmarking, Industrial Sketching, Product Design, Branding

CAD Software: Onshape, SolidWorks, Fusion 360, PTC Creo Parametric

Languages: French (native), English (fluent), Persian (fluent), Spanish (intermediate), German (intermediate)
