## EDUCATION

### Foothill-De Anza College

*A.S. Mechanical Engineering (transfer)*

Cupertino, CA

*Expected Jun 2026 · Cupertino, CA*

### American High School

*California Top 9% UC ranking · 10 AP courses*

Fremont, CA

*Aug. 2020 – Jun. 2024*

## EXPERIENCE

### R&D Hardware Designer

*Infineon Technologies PSOC6*

Apr. 2025 – Present

*Cupertino, CA*

- Designed manufacturable NURBS enclosure for AI drone prototype in collaboration with Infineon's AI R&D team, ensuring proper fastener strategy, PCB mounting, and print-ready geometry.
- Selected as sole mechanical/visual designer among 5 students chosen from 20,000+, leading usability-driven and aesthetic design decisions.
- Developed advanced Class-A surfacing and iterative prototype geometry for hardware built on a pre-release PSOC-6 embedded AI platform, integrating sensors and electronics into functional assembly.

### Chief Design Officer

*NeuroFocus BCI*

Sep. 2025 – Present

*San Jose, CA*

- Led end-to-end mechanical and industrial design of wearable neurotech hardware integrating ECG sensors into a lightweight, ergonomic headset-mountable system.
- Developed full NURBS-based product geometry and prototype iterations independently; project supported by SJSU and Foothill College startup incubators and in collaboration with T1 Korea.

### Lead Robot Designer

*FIRST Robotics (FRC/FTC)*

May 2021 – July 2024

*Fremont/Palo Alto, CA*

- Led mechanical architecture for 7+ competition robots, achieving World Championship Finalist (#4 globally) and 4× Regional Champion.
- Designed high-performance mechanisms under strict weight, power, and reliability constraints.
- Awarded Excellence in Engineering and RTX Innovate for mechanical and systems design.

## PROJECTS

### Titanium Frame Junction | *Parametric NURBS Surfacing (TBD Bike)*

Present

- Designed and parameterized complex geometry for titanium structural junction integrating carbon-fiber tubing under tight spatial and mounting constraints.
- Resolved multi-constraint surfacing problem involving curvature continuity, fit tolerances, and manufacturable interface geometry between titanium and composite members.
- Developed fully parametric model enabling iterative dimensional adjustments without breaking downstream mating surfaces.

### Emami Robotics Alliance (ERA) | — *Founder & Director*

Aug. 2025 – Present

- Founded multi-college robotics competition network connecting Bay Area engineering programs through a unified lightweight combat robotics framework.
- Designed competition architecture including technical rules, safety systems, and scalable event infrastructure supporting 100+ students and multi-campus teams.
- Coordinated facilities, funding, and cross-institution collaboration to establish a sustainable, repeatable engineering competition platform. (\$10k)

## TECHNICAL SKILLS

**Design & Engineering:** Product Design, Advanced NURBS Modeling, Parametric Surfacing, Constraint-Driven Geometry, Industrial Sketching, 3D Printing/CNC/Manual Machining, Mass Prototyping & Benchmarking, Draft Product Design, Branding

**CAD Software:** Onshape, SolidWorks, Fusion 360, PTC Creo Parametric

**Languages:** French (native), English (fluent), Persian (fluent), Spanish (intermediate), German (intermediate)

**Interests:** Cars and Robots
